DETAILED ACTION

Status of the Application

This Office Action is in response to applicant's response filed on 6/19/09.

Applicant's election with traverse of the restriction requirement in the reply is acknowledged. The traversal is on the ground(s) that the generic claims inherently link the species so as to form a single general inventive concept. This is not found persuasive however Examiner has decided to withdraw the species requirement.

Claim(s) 43-47 are pending and examined herein.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 43-47 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabled for the treatment of pain or inflammation by administering to a patient in need thereof a benzylisoquinoline derivative of formula I or II, does not reasonably provide enablement for *preventing*. The specification does not enable any person skilled in the art to which it pertains to practice the invention commensurate in scope with these claims.

The instant specification fails to provide information that would allow the skilled artisan to fully practice the instant invention without undue experimentation. Attention is directed to *In re Wands*, 8 USPQ2d 1400 (CAFC 1988) at 1404 where the court set

Application/Control Number: 10/571,199

Art Unit: 1617

forth the eight factors to consider when assessing if a disclosure would have required undue experimentation. Citing *Ex parte Forman*, 230 USPQ 546 (BdApls 1986) at 547, the court recited eight factors: (1) the nature of the invention; (2) the state of the prior art; (3) the breadth of the claims; (4) the amount of direction or guidance presented; (5) the predictability or unpredictability of the art; (6) the relative skill of those in the art; (7) the presence or absence of working examples; and (8) the quantity of experimentation necessary.

Page 3

- (1) The Nature of the Invention: The rejected claims are drawn to an invention which pertains to a method of preventing and treating pain or inflammation by administering to a patient in need thereof a benzylisoquinoline derivative of formula I or II.
- (2) State of the Prior Art: The state of the art regarding treating pain or inflammation is relatively high, however the state of the art for the prevention of pain or inflammation is non-existent.
- (3) Breadth of Claims: The complex nature of the subject matter of this invention is greatly exacerbated by the breadth of the claims. The claims encompass the prevention, inhibition, and treatment of all types of pain or inflammation.
- (4) Guidance of the Specification: The guidance of the specification as to the prevention of pain or inflammation is completely lacking. The specification discloses preventing the onset of pain or inflammation. However, the specification fails to mention how one is able to determine whether the onset of pain or inflammation in a subject would have occurred in the absence of treatment, thus being unable to confirm that prevention has indeed taken place. Moreover, the specification fails to mention the

Art Unit: 1617

complete prevention or cessation of pain or inflammation once the onset of preclinically evident stage is determined.

- (5) The Predictability or Unpredictability of the Art: The invention is directed to a method of treating, inhibiting, and preventing pain or inflammation. The specification does not disclose how one of ordinary skill in the art at the time of the invention would be able to prevent pain or inflammation, nor does the prior art reveal any type of prevention associated with pain or inflammation.
- (6) The Relative Skill of those in the Art: One of ordinary skill in the art does not know how to prevent pain or inflammation by administering a benzylisoquinoline derivative of formula I or II. Moreover, one is unable to determine whether a subject will ever develop pain or inflammation should this subject be administered the benzylisoquinoline derivative of formula I or II.
- (7) Working Examples: The specification does not give any data for the prevention of any type of pain or inflammation.
- (8) The Quantity of Experimentation Necessary: The specification fails to provide support for the prevention of pain or inflammation in a patient in need thereof by administering a benzylisoquinoline derivative of formula I or II. Nor does it provide information to practice the claimed invention, absent undue experimentation. Genetech, 108 F. 3d at 1366 states that "a patent is not a hunting license. It is not a reward for search, but compensation for its successful conclusion" and "patent protection is granted in return for an enabling disclosure of an invention, not for vague intimations of general ideas that may or may not be workable."

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim(s) 43-47 are rejected under 35 U.S.C. 102(b) as being anticipated by Hu (US Patent 5,627,195).

Hu teach a method of treating a subject with ocular inflammation by administering to the subject an amount of a pharmaceutical composition comprising a tetrandrine agonist (abstract), for example neferine (col. 3, line 38). Compounds of this invention can be formulated into pharmaceutical compositions by admixture with pharmaceutically acceptable non-toxic excipients and carriers, such as sterile water, and may be prepared by any of the methods well known in the pharmaceutical art, for example as described in Remington's Pharmaceutical Sciences (col. 4, lines 33-62).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yong S. Chong whose telephone number is (571)-272-8513. The examiner can normally be reached on M-F, 9-6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, SREENI PADMANABHAN can be reached on (571)-272-0629. The fax
